

*Together,
we're Better!*

IQX provides a range of intuitive SharePoint solutions for the real world, providing seamless Role-Based access to:

- SAP and non-SAP **information** sources for decision making
- Unstructured **content** such as images linked to SAP data and transactions
- Agile **workflows** that span organisation and application boundaries
- SAP **transactions** alongside other applications for seamless processes
- **Search** across both SAP and other data stores

Template Web Parts for SAP

Choose from a portfolio of Role-based SharePoint Web Parts for SAP ranging from simple searches to complex business processes with SAP read and write access. Interact with SAP like never before, our web parts are designed with ease of use in mind.

Create new SAP web parts for SharePoint accessing both standard and custom objects in SAP.

Document Management

Leverage the full capabilities of SharePoint Content Management and seamlessly & easily associate documents stored in SharePoint with SAP objects through ArchiveLink. Utilise SharePoint search to easily access critical business documents whilst maintaining the relationship to the SAP business objects.

Service Jobs

000010002038	28/01/2010	Problem with electric pump equipment 100	Electric pump motor	Pump set 1	Repair

Analytics

IQX provides solutions for rendering your SAP ERP and/or SAP BW information, as well as other SQL data sources to your end users through the SharePoint portal for timely and relevant analytics to influence operational decision making.

SAP Search

IQX integrates SharePoint's Business Data Catalog and Business Connectivity Services to SAP in order to effectively search and retrieve relevant master data and transactions.

Workflows

IQX enables SharePoint workflow solutions that realise the benefits of agile workflow visualisation and end-user control whilst maintaining the ability to reference SAP organisational hierarchies and execute transactions back into SAP.

Key Benefits

Bringing SAP and SharePoint together offers the best of both worlds and facilitates the return on investment of both technologies. SharePoint provides a revolutionary user experience of SAP and facilitates the deployment of SAP to a broader user base with an increase in efficiency, accuracy, timeliness and productivity. Due to the general availability of specialist skills in the market, SharePoint promises a substantially lower cost of ownership over other Portal solutions.

InfoPath Forms

Drive SAP transaction processing to the front line via interactive electronic SharePoint InfoPath forms.

- Simple single point of entry at source
- Reduce the dependency on IT specialists, allow business analysts to take complete ownership of form maintenance
- Leverage a rich toolset including OCR & digital signatures
- Improve form effectiveness through real-time SAP data lookups
- Enable offline form completion with effective Outlook integration

DUET Enterprise

As a Ramp-up Microsoft partner for DUET Enterprise, IQX is well placed to assist you with the scoping, deployment and the extension of your DUET strategy.
